

A  CoreLogic Business

# ECO Hub

Web based integrated workflow management system for energy suppliers in the ECO market

✓ Streamline Operations   ✓ Enhance Productivity   ✓ Mitigate Risk

Our web based desktop software provides an end to end workflow management system, that supports energy suppliers through their ECO obligations, in the delivery of energy efficiency measures and Ofgem reporting.

Our solution controls the movement and validation of data and evidence documentation through the ECO journey. It delivers a fully integrated and configurable management tool designed to improve workflow processes with maximum efficiency, while maintaining quality assurance and compliance.

The software enables instant upload and validation of data, automated ECO score calculations, compliant report formatting and submission to Ofgem, enabling ECO measures to be managed with real-time status updates.

Highly configurable workflow and rules engine, enables suppliers to set their own parameters to suit individual preferences. Third party contract management provides automated billing, with secure electronic data backup.

# How it works

1

Contracted partners upload measure files and associated evidence documents; these are auto-validated against a published data dictionary and only accepted into the system once compliant.

2

Compliance teams can manually spot-check measures and evidence, and accept/reject measures.

3

Measures can be pushed back to partners for correction through the workflow tools.

4

Ofgem compliant notification files (new and edited notifications) are generated for accepted measures.

5

The TM extract generation, result upload and challenge process is completed online via the Technical Monitoring Agent and Installer. The supplier has oversight and can intervene as necessary.

6

Dashboards, complex search and filtering facilities are all included in a simple to use interface.

## ✓ Features

- Complete oversight and management of reported ECO measures in one overview dashboard with real-time status updates.
- Control system administrator and user logins, with defined role permissions to ensure appropriate levels of access to ECO Hub.
- Manage third party companies that report ECO measures to your business, including installer contracts, price books and lots.
- Easy to import reported measures and evidence documentation.
- Highly customisable measure import system, with configurable settings, based on industry standards and user-defined criteria.
- Generation of payment advices for contracted partners, including clawback mechanisms.
- ECO scores automatically calculated on importing measures.
- Automatic data validation checks against reported measures to ensure compliance before submission to Ofgem.
- Error reports generated for measures that have failed data validation.
- Report and manage measures that require Technical Monitoring, including Technical Monitoring agent instructions with measure extract, upload and validation of results of inspection, installer challenge and remediation process, and generation of Ofgem TM report.
- Produce and submit Ofgem compliant reports for the installation of measures, including extension requests and edited notification reports.

# More about eTech

Founded in 2005, eTech is the leading provider of mobile surveying and workflow management software for the UK energy and property services markets.

eTech build property software working with Energy Suppliers, Installers and Assessors supporting the assessment, installation and reporting of suitable energy efficient measures. We manage business processes and secure data exchange, delivering efficiencies and improved risk mitigation.

Our continued investment in software development is underpinned by our technical expertise and industry knowledge. This is key to our operations and enables us to work collaboratively with clients and evolve our product base.
